DETAILED ACTION

1. Claim 36-72 allowed.
2. Claims 3,5-10 and 12-35 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, 2, 4 and 11 rejected under 35 U.S.C. 103(a) as being unpatentable over Sugiyama et al. (6,075,253) in view of Khan et al. (2003/0176075) further in view of West et al. (2005/0053347).

Regarding Claims 1, 2, 4 and 11, Sugiyama et al. disclose a monocrystalline semiconductor photodetector where in Fig. 6 it is disclose the semiconductor substrate 1 a buried silicon layer 2 for conducting light, a germanium layer 7 for conducting light and insulating/dielectric spacer 4. Sugiyama et al. fail to disclose the required cladding layer and plurality of electrodes for the silicon and the germanium layers. However, Khan et al. disclose techniques for plasma etching silicon-germanium where in Fig. 4F, layers 410 and 432 are the cladding layers for plurality of dielectric materials. Furthermore, West et al. disclose an impurity-based waveguide detectors where in Fig. 4J it is plurality of contacts 426 are coupled to two separate layers.

Art Unit: 2826

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required cladding layer and the plurality of contacts in Sugiyama et al. as taught by Khan et al. and West et al., respectively, in order to have a photodetector with increased functionality.
